

Repo Readiness Agent

Autonomous repo readiness for solo founders

â€¢ Hackathon product: founder-facing repo readiness agent

â€¢ Input: a GitHub repository URL

â€¢ Output: a clear readiness decision

â€¢ Core promise: Is this repository still a Prototype, already an MVP, or ready for handoff?

The Problem

Founders can ship fast, but still lack engineering certainty

- â€¢ AI tools help solo founders build quickly
- â€¢ But speed does not guarantee repo quality or readiness
- â€¢ Existing tools give warnings, scores, and code smells
- â€¢ They usually do not answer the founder's real question
- â€¢ Founder question: Is this repo solid enough to demo, launch, or hand off?

The Solution

Repo Readiness Agent turns repo evidence into a founder decision

- â€ Founder submits a GitHub repository
- â€ Agent inspects the repo autonomously
- â€ Agent synthesizes engineering signals into founder language
- â€ Founder-facing output: Stage, Verdict, Top risks, Top 3 fixes, Confidence

Why This Is an Agent

The user gives only the repository. The agent does the rest.

- â€¢ Repo Intake

- â€¢ Signal Inspection

- â€¢ Readiness Judgment

- â€¢ Founder Guidance

- â€¢ Optional follow-up: Improved / Unchanged / Still blocked until target reached

Demo Output Example

Sample founder-facing result from a public repository

â€ Stage: MVP

â€ Verdict: usable for demos or early users, but still needs focused hardening before handoff

â€ Confidence: Medium

â€ Top risks: large files and missing environment template

â€ Top fixes: split oversized files, review flagged security patterns, add .env.example

â€ Founder gates: Demo-safe yes, Launch-ready not yet, Handoff-ready not yet

Why It Matters

Better next-step decisions for solo founders

- â€¢ Know whether a repo is ready for a demo
- â€¢ Reduce hidden technical risk before launch
- â€¢ Prepare cleaner handoff to engineers or contractors
- â€¢ Focus only on the fixes that matter most next
- â€¢ Closing line: Repo Readiness Agent turns repository evidence into a founder decision.
